

# Open Science Upgrade: Adding Blog Posts to my Website and Linking to Rogue Scholar

Adriano Rutz

2025-08-04

I have finally opened a **Posts** section on my website! Every post should now automatically get a DOI.

This is something I have wanted to do for a long time, largely inspired by the tireless and consistent example set by [Egon Willighagen](#) ([Willighagen 2024a](#), [2024b](#), [2025](#)).

It was today's post of ([Fenner 2025](#)) that finally motivated me to look into it again. That led me down a productive rabbit hole to set up Rogue Scholar: first landing on ([Csefalvay 2023](#))'s excellent guide, and then ([Fruehwald 2025](#))'s clear write-up, both of which made the process of integrating Rogue Scholar into a Quarto-based site surprisingly smooth.

All the changes are documented in the following commit:

<https://github.com/Adafede/adafede.github.io/commit/bc2dfe6f>

If you care about attribution, long-term archiving, DOIs and metadata, I highly recommend looking into [Rogue Scholar](#).

**EDIT:** I thought bringing in [CiTO](#) would be a huge plus. I managed to handle the HTML and PDF outputs (again thanks to Egon )([Willighagen 2023](#)) but the feed probably still does not contain annotations.
